CRESTRON VOICE SYSTEM

Your room.
Listens to your voice.

Control lights, blinds and other configured functions of your Crestron system – simply with your voice.

> “Hey Crestron, living room lights to 30 percent.”

A relaxing evening, the right lighting and a short sentence: Crestron Voice System connects your request to your room’s functions. You choose which devices you want to control.

Homes | Hotels | Offices | Conference rooms

EVERYDAY COMFORT

A short sentence.
So many possibilities.

Your voice control adapts to your rooms and the functions configured for your project.

In the kitchen.

Cooking often means doing several things at once. Adjust your configured lighting with a voice command and stay focused on what you are doing.

The scene shows voice control in everyday life.

At work.

Comfortable lighting, the right room temperature or blinds: control the enabled functions by voice while working on your documents.

The devices you want to use are configured specifically for your office or conference room.

Lighting your way. Switch on, switch off or dim – according to your configured lighting.

Comfort in your room. Blinds, room temperature and other functions can be integrated to suit your project.

Your personal wake name. You choose the name used to activate your voice system.

FOR HOTELS & GUESTS

Arrive.
Feel at home. Speak.

A room that feels personal – with voice control for the enabled functions of your Crestron system.

The hotel scene shows how naturally voice control can become part of a stay. Guests voice a request and control the functions configured for their room.

Comfort for your guests.

Lighting, blinds and other suitable functions can be integrated into your room concept. The precise scope is agreed together.

Tailored to your property.

Whether a hotel room, office or conference room: rooms and devices are clearly assigned for the voice control you want.

In your language, too.

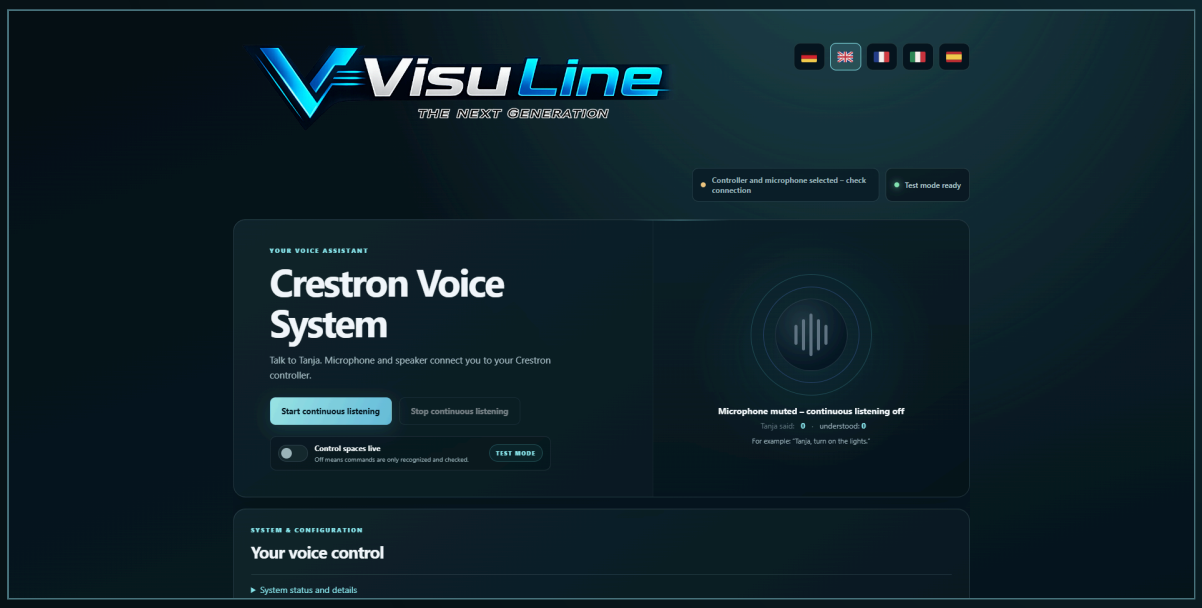

German | English | French | Italian | Spanish

German is the default language. Add other languages using the corresponding language packs.

THE INTERFACE

Clean. Easy to understand. Well structured.

A clear interface guides you from setup to everyday voice control.

Everything in its place.

Language selection, controls and settings are clearly organised, so you can quickly find the important areas of your system.

Personally configured.

The wake name, language and devices you want to use are selected to suit your project. Your voice control stays aligned with the configured functions.

Easy to use. The interface shows the current system status and available controls.

Recognised locally. Speech recognition takes place locally in your system.

Enable selected devices. Setup defines which devices may be controlled by voice.

The original view shown is in English. Language selection offers the languages configured for your system.

GETTING STARTED

From your voice to your room.

The diagram shows the path of a voice command: you speak, the system recognises your request and passes it to the configured Crestron function. A suitable headset can combine microphone and spoken responses.

Installation – briefly explained.

01 · INSTALL

Start the installer.

Open the Windows installer, connect the Raspberry Pi and run the installation.

02 · CONFIGURE

Step by step.

Set up the controller, licence, microphone and devices through the interface.

03 · START

Check & control.

Check device assignments, then deliberately enable the intended functions for voice control.

Requires a suitable Crestron controller (4), a configured connection and the corresponding .smw file, plus suitable audio hardware. Hardware is not included. Available functions depend on your installation and configuration.

Your project. Your voice control. **info@visuline.de →**

Talk to us. Together, we will explore how Crestron Voice System can fit your home, hotel, office or conference room.
